As modern complexity evolves – involving the Design discipline – it introduces new forms of approaches, researchers, as well designers. Contemporary authors focus on the present, offering fresh perspectives on interpreting, understanding, and shaping the future of design.

“Design Research Streams” is the series of lectures promoted as part of the teaching activities of the Masters in Design, Multimedia and Visual Communication and the Master of Science in Product & Service Design at Sapienza University of Rome with the aim of recounting the actual panorama of research topics in the field of Design in Italy through the voices of young SID Italian researchers. A program articulated in eight lectures to present current and future perspectives of the design research scenario.
